
Cash Receipts & Application

Step-by-Step Task Guide

A beginner-friendly walkthrough of applying incoming customer payments in QuickBooks — matching the bank feed to recorded receipts, and handling returned or disputed payments.

Source: “Cash Receipts/Application Knowledge Transfer” recording + its Google Meet transcript

Recorded: July 21, 2026, 3:00 PM MDT (approx. 26 minutes)

Presenter / trainer: Greg Coble • **Trainee:** Connor Schone

Systems: QuickBooks Online (RedTeam Software & Paser), the shared deposit log, QuickBooks Payments (Merchant Service Center)

How this guide was built. Steps, screenshots, and on-screen values were read from the recording’s video frames, and the green “From the meeting transcript” quotes are **verbatim** from the meeting’s Google Meet transcript (lightly trimmed for filler words), tagged with speaker and timestamp.

Related guide. This is the **money-in** (accounts receivable) side. Paying vendors and the deposit mechanics are covered in the **Vendor Payments & Cash Receipts** guide.

The big picture

Apply payments, match the bank feed, handle the occasional return

Susie makes the **remote deposits**; when one hits the bank you get a notification. Using the **deposit log**, you apply each payment to the right client's invoice in QuickBooks (for **RedTeam Software** and **Paser**), then **match** the incoming bank-feed transaction to what you recorded. Do this **daily** so there's little to puzzle over, and **review every match by hand** — don't blind-click Match. Once or twice a month a payment is **returned or disputed**; you research it, reconcile the reversal, and tell the client.

FROM THE MEETING TRANSCRIPT — Greg Coble, 00:03:41

"I would caution you not to just automatically match things... the things coming through the bank are things that you have created... you probably want to at least initially come through and look at it and say, 'Yep, that's the ACH I cut,' and it matches up with the amount — and so you click match."

The steps

System: QuickBooks Online

Step 1 — Apply the deposit to client invoices

When a remote deposit hits the bank, open the **deposit log** and find the deposit for **RedTeam Software** and **Paser**. Use that detail to **apply the payments** in QuickBooks to each client's outstanding invoices. This creates the recorded receipts that the bank feed will match against.

- 1 Open the deposit log for the day's remote deposit.
- 2 In QuickBooks, apply each payment to the correct client's invoice (RedTeam Software / Paser).
- 3 Note the total so it will tie to the bank-feed deposit.

FROM THE MEETING TRANSCRIPT — Greg Coble, 00:00:00

"We go out to the deposit log... and we use that information to apply the payments in QuickBooks Online for each of the respective clients and invoices."

QuickBooks → Bank transactions: the incoming items to match against your recorded receipts.

Step 2 — Review and match the bank feed

Open **Bank transactions**. Each item in the feed usually came from something you created (a deposit, an ACH, a check). For each one, confirm the **amount** and that you recognize it (“yes, that’s the ACH I cut”), then click **Match**. Doing this daily keeps everything recent and easy to recognize.

- 1 Go to **Bank transactions** in QuickBooks.
- 2 For each item, verify the amount and that you created it.
- 3 Click **Match** once you’ve confirmed it — don’t auto-match blindly.

Review daily. Checking the feed every day means every item is a recent transaction you handled — mismatches are rare.

A bank-feed item with Match / Find other matches; verify before matching.

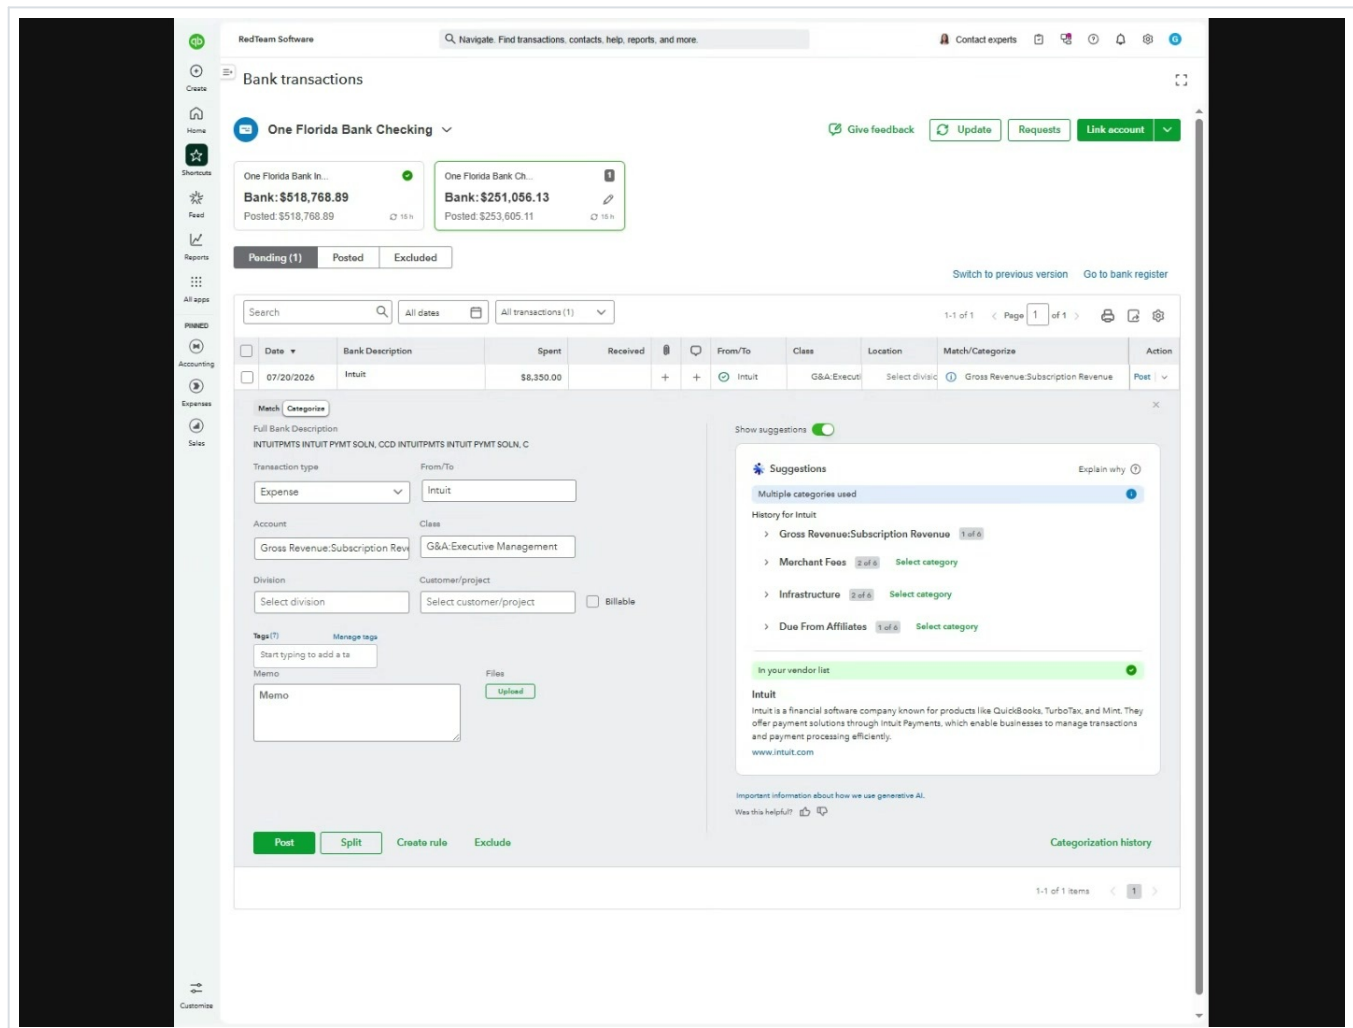

Step 3 — Use “Find other matches” when it doesn’t line up

Sometimes a deposit won’t auto-match (for example, one bank deposit covers several checks). Click **Find other matches**, then select the **received payments** that make up the deposit (e.g. the four checks you applied on the 20th) and click **Match**. The selected receipts should sum to the bank amount.

- 1 On an unmatched deposit, click **Find other matches**.
- 2 Tick the received payments that make up the deposit.
- 3 Confirm they sum to the bank amount, then click **Match**.

FROM THE MEETING TRANSCRIPT — Greg Coble, 00:04:50

"If you were to click match, this does not match... so you want to go to find other matches... here are the four checks that we applied on the 20th, so we click those and then click match."

Find other matches — selecting the received payments that make up a bank deposit.

Step 4 — Spot a returned or disputed payment

Occasionally (once or twice a month) a previously-applied payment is **returned** by the payer's bank — insufficient funds, an unapproved positive-pay item, or a **dispute**. You'll get a notification, and the amount comes back through the bank as an **expense**, often with a **separate return fee**. As soon as you see the notice, **email the client** to let them know.

- 1 Watch for a returned-payment notification in the accounting inbox.
- 2 Expect it to reappear in the bank feed as an expense (plus any return fee).
- 3 Notify the client right away that their payment was returned.

FROM THE MEETING TRANSCRIPT — Greg Coble, 00:07:19

"We received a notification that this payment that was previously applied was returned by the person's bank... so I notified the client that, hey, you've got a returned payment."

Step 5 — Research it in the Merchant Service Center

To see what happened, open the **Merchant Service Center**: the **gear icon** → **Account settings** → **Payments** → **View** (the second view under merchant settings). Search the relevant date range and open the transaction's **history** — you can see when it came in, when it was funded, and when it was returned or **disputed**, which tells you why the funds reversed.

- 1 In QuickBooks, click the **gear** → **Account settings** → **Payments** → **View**.
- 2 Search the date range around the return.
- 3 Open the transaction's **view history** to see the funded → returned/disputed timeline.

FROM THE MEETING TRANSCRIPT — Greg Coble, 00:14:53

"If you go to QuickBooks and go to the gear icon, account settings, and then the second view for merchant service center, this is where it'll bring you to do research on stuff coming through the portal."

The QuickBooks Payments Merchant Service Center — research the returned/disputed transaction.

Step 6 — Reconcile the reversal and tell the client

Back in **Bank transactions**, find the **original deposit** and note exactly how it was coded — e.g. **Subscription Revenue** with the **Executive Management** class. Code the **returned** amount the **same way** (same account and class) so the two offset exactly, add the **customer**, and add a **memo** describing the return (e.g. "<client> return payment 7/15 — disputed"), then **Post**. Finish by emailing the client that their payment was returned.

- 1 Find the original deposit; note its account and class coding.
- 2 Code the reversal identically (same account + class) so it offsets.
- 3 Add the customer and a memo explaining the return; click **Post**.
- 4 Email the client to confirm the payment was returned.

FROM THE MEETING TRANSCRIPT — Greg Coble, 00:20:32

"I coded this to gross subscription revenue, executive management is the class, because I want those to match exactly... I put in a memo — return disputed — and then click post... so essentially we've offset the two."

Quick reference

Golden rules, the returned-payment checklist, and glossary

Golden rules

- **Review the bank feed daily** — recent items are easy to recognize.
- **Never blind-match** — verify the amount and that you created the item first.
- Use **Find other matches** when one deposit covers several receipts.
- On a reversal, **match the original coding exactly** (account + class) so it offsets, and add a memo.
- Always **email the client** when a payment is returned.

Returned-payment checklist

- 1 Notification received → email the client.
- 2 Research in the Merchant Service Center (gear → Account settings → Payments → View) — check the history.
- 3 Find the original deposit's coding (e.g. Subscription Revenue / Executive Management).
- 4 Code the returned amount the same way; add customer + memo; Post to offset.

Glossary

- **Deposit log** — the shared record of remote deposits (RedTeam Software / Paser) used to apply payments.
- **Match / Find other matches** — QuickBooks tools to tie a bank-feed item to recorded receipts.
- **Merchant Service Center** — the QuickBooks Payments portal for researching card/ACH transactions and disputes.
- **Returned / disputed payment** — a payment the payer's bank reverses; comes back as an expense (plus a possible return fee).

About the quotes. The green "From the meeting transcript" quotes are verbatim from the meeting's official Google Meet transcript (lightly trimmed for filler words).
