
Ramp Corporate Cards

Step-by-Step Task Guide

A beginner-friendly walkthrough of administering RedTeam's corporate cards in Ramp — users and cards, spend controls, coding transactions and syncing them to QuickBooks, and reconciling the monthly statement.

Source: "Ramp Knowledge Transfer" recording + its Google Meet transcript

Recorded: July 22, 2026, 12:30 PM MDT (approx. 48 minutes)

Presenter / trainer: Greg Coble • **Trainee / new admin:** Connor Schone

Systems: Ramp (app.ramp.com), integrated with QuickBooks Online

How this guide was built. Steps, screenshots, and on-screen values were read from the recording's video frames, and the green "From the meeting transcript" quotes are **verbatim** from the meeting's Google Meet transcript (lightly trimmed for filler words), tagged with speaker and timestamp.

The big picture

What Ramp is, and how it fits with QuickBooks

Ramp is RedTeam's corporate-card platform. Use cards for smaller, recurring tool subscriptions; keep large enterprise vendor payments on **invoice** (not card) to reduce risk. Connor is now an **administrator / co-owner**, so you manage users, cards, spend controls, and the monthly accounting. The key rhythm: employees spend → you **code** transactions and **sync** them to **QuickBooks Online** → the statement auto-pays on the **22nd** → you **reconcile** in QuickBooks.

Two card types. **Physical** cards are mainly for travel & entertainment; **virtual** cards are for department-specific spending. Toggle between them to find a specific card. Rewards accrue on spend — the plan is to let them build to **\$50,000** before applying them against a statement.

The steps

System: Ramp (app.ramp.com)

Step 1 — Manage users (invite, roles, physical cards)

As an admin you add and manage people. To add someone, go to the **invite** area, enter their **email**, and set their **provisions** — role (Employee / Admin / Guest), manager, and department. You can also issue a **physical Ramp card**, either prompting the cardholder for their address or entering a mailing address yourself. Keep each person's manager and department current for accurate reporting.

- 1 Open the **invite** / add-user area.
- 2 Enter the email; set role (Employee/Admin/Guest), manager, and department.
- 3 Optionally issue a physical card (prompt for address or enter it).

The screenshot displays the 'Add user' form in the Ramp system. The form is divided into several sections: 'Enter email address' (with a text input field), 'First name' and 'Last name' (text input fields), 'Manager' (a dropdown menu), 'Work location' (a dropdown menu set to 'RedTeam Main'), 'Department' (a dropdown menu set to 'G&A Executive Management'), 'Country' (a dropdown menu set to 'US (+1)'), and 'Phone number' (a text input field). Below these fields is the 'Role & permissions' section, which includes three tabs: 'Employee' (selected), 'Admin', and 'Guest'. The 'Employee' tab shows 'Access to funds and ability to make purchases'. Below the tabs is a toggle for 'Will they manage others?' and a text input for 'Additional roles (Accounting, Accounts Payable, etc)'. The 'Access to funds' section includes a '+ Add funds' button, a 'Control spend, before it happens' section with a description and a visual of a Ramp card, and an 'Add pre-approved funds' section with a description. At the bottom, there is a toggle for 'Issue a physical Ramp Card' and an 'Advanced' dropdown menu. The form has 'Save as draft' and 'Send invite' buttons at the bottom right.

Adding a user in Ramp — role & permissions, department, and physical-card issuance.

Step 2 — Cards, and sharing them safely

The **Cards** view lists each person and the cards they can access. **Physical** cards can be carried and swiped; **virtual** cards are for department spend (a person may appear under both). You can copy a card's details to share, but **don't share card credentials routinely** — for a genuine one-off need (e.g.

Tracy needing the ConnectTeam app), use **one-time provisioning** instead of handing over full card access.

- 1 Open **Cards**; toggle physical vs. virtual to find a card.
- 2 For a one-off, use one-time provisioning rather than sharing the card number.
- 3 Avoid distributing company-card credentials on a regular basis.

The Ramp Cards view — people and their physical/virtual cards.

FROM THE MEETING TRANSCRIPT — Greg Coble, 00:05:18

“Typically I’m not sharing this card out with people on a regular basis, even though they might need it on a one-time, one-off basis...”

Step 3 — Security & profiles (lock cards / accounts)

When someone leaves or a card is compromised, **lock** the card or the user account to stop all authorizations and transactions — do this from the **user profile** or the **card details**. The same profile is where you update a person’s **manager** or **department**. There’s also a **Danger zone** on the profile for disabling access.

- 1 Open the employee’s **profile** (or the card’s details).
- 2 Update manager / department as needed.

-
-
- 3 To offboard or stop fraud, **lock** the card/account (Danger zone) to halt authorizations.

Managing a user in Ramp — role & permissions and the Danger zone to lock/disable.

Step 4 — Policies & spend controls

Ramp enforces your guardrails per card. **Receipts** are required on any purchase **over \$25** (under \$25 needs none). Each card has a **spend limit** (e.g. \$2,500 for a travel card, \$15,000 for the operations card), and you can grant a **temporary increase** when needed. Under **Spending controls and restrictions** you can **block specific vendors/categories** — useful when a cancelled subscription keeps charging (Greg blocked **Adobe** this way). You can also set a card's **QuickBooks class** here via an accounting rule.

- 1 Set/confirm the card's **spend limit**; grant a temporary increase if needed.
- 2 Require receipts > \$25 (already the policy).
- 3 Use **Spending controls & restrictions** to block a vendor/category that shouldn't charge.
- 4 Set the card's QuickBooks **class** under the accounting rules.

Editing a card — spend limit, blocked vendors (Adobe/Github), and the QuickBooks class rule.

FROM THE MEETING TRANSCRIPT — Greg Coble, 00:38:24

"I had an Adobe subscription... despite all my attempts to cancel, they continued to charge the card, and so I just came in here and blocked it so it could not continue."

Receipts. Anything **over \$25 requires a receipt**; under \$25 does not. Approvals are sent but aren't hard-enforced, so the receipt rule is your main control.

Step 5 — Code transactions and sync to QuickBooks

Each month, work the transactions: filter for the ones needing attention (e.g. **receipts**), set the **department** and **account** coding, and mark each **Ready**. Then **Sync** to QuickBooks Online — the sync carries the **vendor**, **class**, **account**, and the attached **receipt**. Verify a few in QuickBooks (the receipt stays attached). For anything unclear or wrong (an equipment charge, or a personal Uber on a company card), message the employee in Ramp's chat to resolve or reverse it.

- 1 Filter the transactions (e.g. by receipts) and review each.
- 2 Set the **department** and **account** coding; mark items **Ready**.
- 3 **Sync** to QuickBooks Online; spot-check a few (vendor, class, account, receipt).
- 4 Use chat to clear up unclear or personal charges.

Ramp's Review & Sync — coded transactions ready to push to QuickBooks Online.

Exceptions. A personal charge (e.g. a personal Uber) should be flagged and reversed, not approved — Greg handles these by messaging the employee directly.

Step 6 — Reimbursements

For people paying out of pocket, Ramp has a dedicated **reimbursement** section. The employee submits the invoice/receipt; a **manager approves** it; Ramp then triggers a **bank transaction** for the reimbursement, which you reconcile in QuickBooks Online like any other payment.

- 1 Employee submits the out-of-pocket expense in the reimbursement section.
- 2 Manager reviews and approves it.
- 3 Ramp issues the reimbursement as a bank transaction — reconcile it in QuickBooks.

Step 7 — Statements, rewards & reconciling in QuickBooks

Ramp statements cover a set monthly period and **auto-pay on the 22nd**. Let **rewards** accumulate to **\$50,000** before applying them (simpler accounting). To reconcile, first make sure **every transaction in the statement period has synced from Ramp to QuickBooks** — otherwise the ending balance won't match. Then in QuickBooks click the **gear** → **Reconcile** and reconcile the card account to the

statement.

- 1 Confirm all statement-period transactions have synced from Ramp to QuickBooks.
- 2 Download the Ramp statement if needed.
- 3 In QuickBooks, **gear** → **Reconcile**; reconcile the card to the statement (ending balance should match).
- 4 Let rewards build toward \$50,000 before applying them.

FROM THE MEETING TRANSCRIPT — Greg Coble, 00:46:42

“Before you do your reconciliation, you want to make sure that you’ve got all of your transactions synced over from Ramp to QBO... otherwise you’re going to have variances or differences.”

Quick reference

Policies, the monthly rhythm, and glossary

Policies at a glance

- **Receipts:** required over \$25; not required under \$25.
- **Card types:** physical = travel & entertainment; virtual = department spend.
- **Large vendor payments:** pay by invoice, not card; small recurring subscriptions on cards.
- **Sharing:** never share card credentials routinely — use one-time provisioning.
- **Blocking:** use Spending controls & restrictions to stop a vendor that keeps charging.
- **Rewards:** accumulate to \$50,000 before applying to a statement.

The monthly rhythm

- 1 Code transactions (department + account), attach receipts, mark **Ready**.
- 2 **Sync** everything to QuickBooks Online (vendor, class, account, receipt carry over).
- 3 Statement auto-pays on the **22nd**.
- 4 Confirm all statement-period items synced, then **reconcile** in QuickBooks (gear → Reconcile).

Glossary

- **Physical / virtual card** — carried travel card vs. department spending card.
- **One-time provisioning** — a single-use card grant instead of sharing the real card number.
- **Spending controls & restrictions** — per-card limits and vendor/category blocks.
- **Ready / Sync** — marking a coded transaction done, then pushing it to QuickBooks Online.
- **Reimbursement** — Ramp's flow for paying back personal out-of-pocket spend.

About the quotes. The green "From the meeting transcript" quotes are verbatim from the meeting's official Google Meet transcript (lightly trimmed for filler words).
