
RedTeam Flex Billing

Step-by-Step Task Guide

A beginner-friendly walkthrough of billing RedTeam Flex clients — turning a closed HubSpot deal into a QuickBooks invoice, and preparing the monthly/quarterly renewal billing on the 25th.

Source: “Flex Billing Knowledge Transfer” recording + its Google Meet transcript

Recorded: July 15, 2026, 12:00 PM MDT (approx. 56 minutes)

Presenter / trainer: Greg Coble • **Trainee:** Connor Schone

Systems: Gmail (accounting@redteam.com), HubSpot, PandaDoc, QuickBooks Online (RedTeam Software)

How this guide was built. Steps, screenshots, and on-screen values were read from the recording’s video frames, and the green “From the meeting transcript” quotes are **verbatim** from the meeting’s Google Meet transcript (lightly trimmed for filler words), each tagged with speaker and timestamp.

The big picture

What Flex billing is, and the three ways invoices happen

Flex is RedTeam's current product line. Its subscriptions are priced on a **tiered** model based on a client's **Average/Active Project Value (APV)**. Billing lives in **QuickBooks Online** (the RedTeam Software company); new deals arrive from **HubSpot**, and signed agreements come from **PandaDoc**. You work from the shared **accounting@redteam.com** inbox, which is organized into RedTeam and Paser folders.

Invoices happen in three ways:

- **Acquisitions** — new sales, invoiced as the deal closes.
- **Success-team renewals** — invoiced as they close and come across accounting@ from HubSpot.
- **Monthly / quarterly renewals** — invoiced together on the **25th** of the month.

FROM THE MEETING TRANSCRIPT — Greg Coble, 00:15:35

"These are ones that are one-offs — as the sale occurs, we go ahead and send those out. Same thing with renewals... as those come across accounting at redteam.com from the HubSpot notifications, I invoice those. And then on the 25th I invoice just regular renewals... on a monthly cadence or quarterly cadence."

Pricing models. Flex uses **tiered** pricing (APV tiers, with **no clawback**). Older/legacy models you may still see include **bracket** (which does claw back to January 1), **elastic**, **capped**, **fixed**, **unlimited**, and **seat**. Any prepay discount beyond the standard **5%** needs management approval.

Part I — Invoice a new or renewing client

Do this as deals close (acquisitions and success-team renewals)

Step 1 — Spot the new deal in the inbox

New deals and renewals land in **accounting@redteam.com** as **HubSpot** notifications (e.g. “Renewal Deal Closed Won”). The inbox is organized with folders/labels for RedTeam and Paser to keep the two sides separate. Open the notification and click **View at HubSpot**.

- 1 Open the HubSpot notification email in **accounting@redteam.com**.
- 2 Confirm it's a Flex deal.
- 3 Click **View at HubSpot** to open the deal.

FROM THE MEETING TRANSCRIPT — Greg Coble, 00:00:44

“Here’s the HubSpot notification right here where a new deal was sold... you click on View at HubSpot... here’s the PandaDoc — this is the service agreement, so you just click open that.”

The accounting inbox (RedTeam/Paser folders) with a HubSpot “Deal Closed Won” notification.

Step 2 — Open the deal and the service agreement

In the HubSpot deal record, scroll to confirm it's a Flex deal and find the **PandaDoc** link to the signed **service agreement**. Open it and **download** a copy — you'll attach it to the invoice later, and you'll read the terms (APV, pricing type, term dates, amounts) off it as you build the invoice.

- 1 Open the HubSpot deal; verify it's Flex.
- 2 Open the **PandaDoc** service agreement from the deal.
- 3 **Download** the signed agreement to attach later.

The HubSpot deal record — the source of the service agreement and terms.

The PandaDoc service agreement (left) beside QuickBooks — the terms you'll transcribe onto the invoice.

Step 3 — Create (or open) the customer in QuickBooks

In QuickBooks Online (RedTeam Software), go to **Customers & leads** and add the customer with the + button. Type the first/last name, then the **company name**, and set the **Display name** to the **company** (not the individual). Pull the **email** from PandaDoc and the **street address** from the service agreement. If the client is **tax exempt**, mark it and upload their certificate.

- 1 Go to **Customers & leads**; click + to add a customer.
- 2 Enter name and **company name**; set **Display name** = company.
- 3 Add the **email** (from PandaDoc) and **address** (from the agreement).
- 4 Mark **tax exempt** and attach the certificate only if applicable.
- 5 Save.

FROM THE MEETING TRANSCRIPT — Greg Coble, 00:05:19

"We're going to put the company name... I come over to display name and make sure it has the company name versus the individual's name. I grab the email address in PandaDoc... and then the street address off of the service agreement."

Tax exempt is rare. Most clients are for-profit and taxable. Set exemption only if the client confirms it, and attach their certificate.

Creating/opening the customer in QuickBooks from the deal and agreement.

Step 4 — Build the invoice line items

From the customer, choose **New transaction** → **Invoice**. Read the **Expected APV** and terms off the service agreement. Enter the **price type** (e.g. *tiered*), then add the subscription line: search “**RedTeam Flex Tiered Pricing**,” set **quantity 12** for annual billing (QuickBooks auto-calculates the monthly rate), and set the **class** to **RedTeam Subscription New** (use the renewal class for renewals).

Add other lines as needed: **professional services**, **discounts** (own line), and add-ons such as **QuickBooks Online for Flex** (qty 12, class **Add-on**). Returning clients may waive implementation. Confirm each amount ties back to the agreement.

- 1 Create the **Invoice**; enter the **Expected APV** and price type.
- 2 Add **RedTeam Flex Tiered Pricing**, qty **12**, total amount; class **RedTeam Subscription New**.
- 3 Add add-ons (e.g. **QuickBooks Online for Flex**, qty 12, class **Add-on**).

- 4 Enter any discount on its own line; confirm amounts tie to the agreement.

FROM THE MEETING TRANSCRIPT — Greg Coble, 00:08:31

"I put in the price type here, tiered... I search for tiered pricing — it comes up RedTeam Flex Tiered Pricing... put the quantity of 12 because they're going to be an annual bill... and then the class, this would be a subscription and it's going to be new."

Discounts. The standard prepay discount is **5%**. Enter discounts on their own line; anything beyond the agreed level needs management approval.

The screenshot displays the RedTeam Flex Billing interface. On the left, the 'Product & Services' section shows a table of items with columns for Product Name, Price, and Total. The items include 'RedTeam Flex - Complete (Capped Fee)' and 'RedTeam Flex - QuickBooks Online'. On the right, the 'Invoice' form is visible, showing fields for Customer Information, Payment Terms, and a table of Invoice Line Items. The bottom of the screen shows the Windows taskbar with the date 2025-08-22.

The invoice line items — tiered pricing, quantity 12 for annual, and the subscription class.

Step 5 — Add notes & attachments, then send

In the invoice **notes**, record the **pricing type**, **APV**, the **term** (e.g. 7/15/26–7/15/27), and the cadence, so you can read everything at a glance later without reopening the agreement. **Attach** the signed service agreement and a **W-9** — so the client has a signed copy and can set you up as a vendor without emailing. Use **today's date**, then **Save and close** and **Send**.

Click the word **Invoice** to open the history pane — you can see at a glance when it was sent, reviewed, and paid.

- 1 Add notes: pricing type, APV, term, and cadence.
- 2 Attach the signed **service agreement** and a **W-9**.
- 3 Use today's date; **Save and close**, then **Send**.
- 4 Open the **Invoice** history pane to confirm it sent.

FROM THE MEETING TRANSCRIPT — Greg Coble, 00:11:02

"I'm going to attach the service agreement copy. I do that for two reasons: one, the client will have a signed copy along with their invoice... and two, it's always there for me — I don't have to go to PandaDoc or HubSpot to find it."

Deferred revenue. Annual invoices are later moved into **deferred revenue** and amortized over 12 months — that's covered in the RevRec + Deferred Revenue guide.

Part II — Prepare the monthly / quarterly billing (the 25th)

Build the billing worklist from QuickBooks + Excel

Step 6 — Run the Sales by Customer Summary report

To prepare the recurring renewals billed on the 25th, run the **Sales by Customer Summary** report in QuickBooks (Standard reports). Set the range from **July 2025 through July 30, 2026** and display **by months**. Running a full year lets you see, at a glance, which clients were already invoiced **annually** versus which bill **monthly** — i.e. each client's billing cadence.

- 1 Open **Standard reports** → **Sales by Customer Summary**.
- 2 Set the range (about July 2025 → July 30, 2026); display **by months**.
- 3 Use the annual-vs-monthly pattern to identify each client's cadence.

FROM THE MEETING TRANSCRIPT — Greg Coble, 00:18:35

"By running it for a full year, I can see if they've been invoiced already on an annual basis versus... monthly. It just helps me determine what billing cycle they're on at a quick visual look."

The Sales by Customer Summary report, by month, showing each client's billing cadence.

Step 7 — Build the pricing workbook in Excel (with VLOOKUP)

Customize the report by **Price type** and run it once for each type — **Caps, Elastic, Fixed, Unlimited** (and Seat) — then **stack** each result in one Excel workbook. Separately, run a full client list with no price type. Use a **VLOOKUP** to attach the price type to every client, so you have a single worklist showing each client and their pricing model.

- 1 Customize the report by **Price type**; run once per type and stack them in Excel.
- 2 Run a full client list (no price type).
- 3 **VLOOKUP** the price type onto the full list.
- 4 Save/share the workbook (e.g. "07-25-26 Flex invoice").

FROM THE MEETING TRANSCRIPT — Greg Coble, 00:25:03

"I just do a VLOOKUP... I run one out that has every client on it... grab the price type and bring that back over to the other spreadsheet."

The stacked pricing workbook — a VLOOKUP attaches each client's price type.

Step 8 — Handle churn and missing (“NA”) price types

Turn on filters. Clients whose names contain “**deleted**” have churned — filter and mark them **churn**. Clients showing **NA** have no price type yet, usually because they haven’t renewed under the new model or it hasn’t been entered in QuickBooks. Investigate the NAs; where you can determine the price type, add it back into the client’s QuickBooks record. (Intercompany entries like Paser, Inc. are expected.)

- 1 Filter for “**deleted**” names and mark them **churn**.
- 2 Filter for **NA** and investigate each.
- 3 Add the price type in QuickBooks where you can determine it.
- 4 Leave known intercompany entries (e.g. Paser, Inc.) as-is.

FROM THE MEETING TRANSCRIPT — Greg Coble, 00:30:53

“The ones that are deleted... have delete in the name and that’s because they’ve churned, so I can go ahead and mark these as churn. And then look at NA... they don’t have a price type associated with them yet, but they will as the renewals come through.”

Step 9 — Mark recurring invoices, then bill

Before invoicing, mark which clients are on **recurring** invoices: in QuickBooks go to **Settings** → **Recurring transactions** and filter **Type = Invoice** to see them all. Greg starts with **capped** clients because their price is fixed (no APV lookup needed), then works the rest. Begin the 25th prep **two to three days in advance**.

- 1 Go to **Settings** → **Recurring transactions**; filter **Type = Invoice**.
- 2 Mark which clients are recurring on your worklist.
- 3 Start with **capped** clients (fixed price), then the rest.
- 4 Begin prep 2–3 days before the 25th.

FROM THE MEETING TRANSCRIPT — Greg Coble, 00:46:44

"I've also been setting these up on recurring... go up to settings, recurring transactions... filter on type, which is the invoice. So I grab all the recurring invoices and mark all the ones that are recurring."

Timing. The 25th isn't rigid, but plan to start two to three days ahead so there's room to investigate NAs and variances.

QuickBooks Settings → Recurring transactions, filtered to invoices.

Quick reference

Line-item recipe, pricing models, and glossary

Flex invoice line-item recipe

- **Subscription:** RedTeam Flex Tiered Pricing • qty **12** (annual) • class **RedTeam Subscription New** (or the renewal class).
- **Add-on:** e.g. QuickBooks Online for Flex • qty **12** • class **Add-on**.
- **Professional services / discounts:** each on its own line (discount classes: “Discounts New”, etc.).
- **Notes:** pricing type, APV, term dates, cadence. **Attachments:** signed agreement + W-9.

Pricing models

Model	How it works
Tiered (current)	APV-based tiers; no clawback; can move up a tier as APV grows
Bracket (legacy / Go)	Move up a bracket with a clawback to Jan 1 (projects charged once, in progress)
Elastic / Capped / Fixed	Earlier models; capped = fixed price (no APV lookup)
Unlimited / Seat	Older models; a few clients remain on these

Glossary

- **Flex** — RedTeam’s current product line, billed on tiered/APV pricing.
- **APV** — Average/Active Project Value; the basis for tiered pricing.
- **HubSpot** — CRM; new deals/renewals notify accounting@ here.
- **PandaDoc** — where the signed service agreement lives.
- **Three billing types** — acquisitions, success-team renewals, and monthly/quarterly renewals (the 25th).
- **Recurring transactions** — QuickBooks templates that auto-generate repeating invoices.

About the quotes. The green “From the meeting transcript” quotes are verbatim from the meeting’s official Google Meet transcript (lightly trimmed for filler words).

Part 2 — Follow-up

Recorded July 22, 2026 — the monthly renewal run in depth: verify pricing, send on the 25th, and handle exceptions

Part 1 covered turning a deal into an invoice. This follow-up runs the monthly renewals end-to-end: prepare each renewal invoice, verify its pricing and APV against the agreement, send them all on the 25th, and handle the common exceptions (rejected payments and credit memos). Step numbers continue from Part 1 (which ended at Step 9). A note at the end covers the planned move to **Chargebee**.

Step 10 — Prepare a renewal invoice

Renewals arrive as **HubSpot** notifications in accounting@redteam.com. Open the notification, then the **PandaDoc** (or the attached agreement) to read the term and pricing. In QuickBooks, open the customer and the pre-created invoice **dated the 25th**. If the client moved from monthly to annual, remove the old single-month service date and rebuild the line: pick the correct **pricing type** (e.g. tiered), set **quantity 12** and the gross amount to **Subscription Revenue**, add the **discount** line (Discount Recurring / Renewal), and the **QuickBooks Online** add-on line. Update the **Expected APV** and the customer note ("invoice annual"), and swap in the new signed agreement as the attachment.

- 1 Open the HubSpot notification → PandaDoc/agreement; note the term and pricing.
- 2 Open the customer's invoice in QuickBooks, dated the **25th**.
- 3 Set the pricing-type line (qty 12, gross to Subscription Revenue), discount line, and QBO add-on.
- 4 Update Expected APV + the "invoice annual" note; attach the new agreement.

A renewal agreement (left) beside the QuickBooks invoice being prepared (right).

Step 11 — Verify pricing and APV against the agreement

Confirm the invoice matches the client's plan. For **capped** clients the price is fixed (no APV lookup). For **elastic/tiered**, check the client's **expected APV** against your APV spreadsheet and apply the correct **bracket/overage rate** and any **discount**. Example: Houseion Construction (3-year, monthly, elastic) at ~\$14.1M APV falls in the \$12.5–15M bracket at \$1,250, with a 10% discount — confirm the invoice total ties out.

- 1 Identify the pricing type (capped / fixed / elastic / tiered).
- 2 For elastic/tiered, look up the client's APV and apply the right bracket/overage rate.
- 3 Apply the agreed discount; confirm the invoice total matches the agreement.

Checking an elastic client's APV and overage bracket (Excel) against the invoice (QuickBooks).

Missing tier table. A tiered renewal agreement should include the tier table (it was missing on West Coast Mechanical). It's hard to enforce tiered pricing without it — flag the sales team (Jared) to fix the template.

Step 12 — Work through the renewals by pricing type

Drive the month from the client spreadsheet, working **one pricing type at a time** (capped, then elastic, fixed, tiered) so you're not constantly switching contexts. The fastest way to build each invoice is to open last month's and **duplicate** it, then update the service date and class. Mark **churned** clients ("deleted" in the name) inactive, and note which are **recurring** vs **annual** so you know which invoices the system will auto-create. Keep short notes on the sheet for exceptions (e.g. Fortress Construction moved Go → Flex).

- 1 Filter the spreadsheet and work one pricing type at a time.
- 2 Duplicate last month's invoice; update the service date and class.
- 3 Mark churned ("deleted") clients inactive; flag recurring vs annual.
- 4 Add notes for anything unusual for future reference.

The client spreadsheet (with pricing type, APV, and notes) driving the renewal workload.

FROM THE MEETING TRANSCRIPT — Greg Coble, 00:18:57

"I'll tackle it by group — capped, elastic, fixed, tiered — so in my mind I'm not trying to figure out what type of price they have... the capped, you don't have to worry about the APV."

Step 13 — Send the invoices on the 25th

On the 25th (after the recurring invoices have generated), go to **Sales & get paid** → **Sales transactions**, set **Type = Invoices**, and filter the date to the **25th** ("Today"). Select all the invoices, uncheck any you don't want to send, then **Batch actions** → **Send**. Each row's status will change to "Sent." Repeat **page by page** (it only sends one page at a time).

- 1 Wait for the recurring invoices to generate (they create on the 25th).
- 2 **Sales transactions** → Type = Invoices → date = the 25th.
- 3 Select all (deselect any exceptions) → **Batch actions** → **Send**.
- 4 Repeat for each page; confirm every row shows "Sent."

Sending the day's invoices with Batch actions in QuickBooks Sales transactions.

FROM THE MEETING TRANSCRIPT — Greg Coble, 00:35:02

“You click them all, and if you were ready to send you come up to batch actions and click send... the thing you need to remember is to go to the next page, because that only does one page at a time.”

Variance check. After sending, compare this month's invoices to last month's to spot big changes — new, churned, or re-rated clients — and investigate anything unexpected.

Step 14 — Handle a rejected (ACH) payment

When a client's payment is rejected (e.g. Corbett), create a **new invoice** dated the payment date and select **“AC rejected”** (which auto-fills the description), for the payment amount. Then open the rejected **payment** → **View/edit**, **uncheck** the original invoice and **check** the new “AC rejected” invoice so the two **wash out**. That reopens the original invoice; use **Share invoice link** to email the client a link for a replacement payment, which you then apply to the original invoice.

- 1 Create a new invoice dated the payment date; select **AC rejected**; enter the amount.
- 2 Open the rejected payment → **View/edit**; move it from the original invoice to the “AC rejected” invoice.
- 3 The original reopens — **Share invoice link** and email the client for a replacement.

4 Apply the replacement payment to the original invoice.

The screenshot displays a dual-screen setup. On the left, a spreadsheet titled 'Year Summary' lists various construction companies and their monthly payments from January 2024 to June 2024. The right side shows a software interface for 'Corbett Construction' with a list of transactions, including payments and invoices. A video call window is visible in the center, showing three participants.

Creating the "AC rejected" invoice and re-applying the payment so the two offset.

FROM THE MEETING TRANSCRIPT — Greg Coble, 00:25:46

"What I do is I create a brand new invoice... I date it the same day as the payment... I put the selection AC rejected... then I'll come into the payment that was rejected... and reapply it to the AC rejected, so those two wash out, and then you have your original invoice where you can share that link again."

Step 15 — Credit memos & the year-to-date review

Some accounts need **credit memos** to correct earlier billing. Example: Eagle One Construction had a project wrongly included at onboarding, so credit memos reversed the 2/25–4/25 invoices and the account switched to the agreed rate. To catch these, run the client's activity **year-to-date, by month** — the trend makes historical credit memos, catch-ups, and anomalies obvious, and each credit memo's memo explains why.

- 1 Run the account's history **YTD by month** to see the trend.
- 2 Look for credit memos / catch-ups / unusual swings.
- 3 Read each credit memo's note to understand the correction; add your own note if helpful.

Reviewing a client's year-to-date activity to spot credit memos and anomalies.

FROM THE MEETING TRANSCRIPT — Greg Coble, 00:29:47

"I run it out year-to-date, all by months, so I can look at the trend of what's going on... it helps jar my memory or understand what's going on with the account."

Step 16 — Coming soon: the move to Chargebee

RedTeam is planning to move Flex billing (and revenue recognition) to **Chargebee** — chosen for reliability and a built-in rev-rec component, with implementation targeted around July 29 and the first August invoices on the 25th. **Important:** when you cut over, don't let QuickBooks keep generating invoices too. In QuickBooks go to **Settings** → **Recurring transactions** and set each invoice template to **Unscheduled** (rather than deleting) — that stops it from creating invoices but keeps it as a contingency if you need to revert. If a scheduled run is missed, use **Use** on a template to create a one-off invoice.

- 1 Before cutover, open **Settings** → **Recurring transactions** in QuickBooks.
- 2 Set each invoice template to **Unscheduled** (don't delete — keep as a fallback).
- 3 If a run is missed, click **Use** on a template to create a one-off invoice.
- 4 Also: get the accounting@ login and set up RingCentral for accounting calls (~5–10/week).

QuickBooks Recurring Transactions — set templates to **Unscheduled** when moving to Chargebee.

FROM THE MEETING TRANSCRIPT — Greg Coble, 00:41:44

“You could turn it to unscheduled... effectively it wouldn't create and it wouldn't go into QBO... that way you keep a contingency plan in case you need to revert.”
